

# No Maintenance Required.

## Billing Solutions that Optimize and Expedite Reimbursement.

Traditional reimbursement software programs do not fully address the complex billing process of hospital-based physicians. For emergency physicians in particular, a high level of specialization is critical to ensure accurate and timely processing of medical claims. Medrium's end-to-end billing solutions are designed to meet the challenges of hospital-based billing and eliminate the hassles and headaches often associated with reimbursement.

Medrium serves hospital-based physician specialists by providing web-based billing solutions that optimize and expedite reimbursement. Medrium achieves first pass acceptance on 93% of claims filed because of its robust rules engine and long-standing expertise in specialist medical billing. Physicians benefit from the user-friendly, web-based solution that offers 24/7 access to real-time claims' status and payment processing.

### End-to-end billing solutions for hospital-based physicians.

Eliminate the hassles of medical billing by allowing Medrium to:

- Enter and manage all patient demographics, coding and claim information
- Submit and follow up on claims
- Actively manage Accounts Receivable
- Manage all correspondence with patients including statements and self-payments
- Provide detailed and customized analyses and reports
- Back up and maintain all data

### Proven web-based technology designed to ensure prompt and accurate reimbursement.

Sophisticated rules engine eliminates data entry error

- Continually updated database of local and national payor rules and regulations
- Rules can be client-based, specialty-based or payor-based
- Strict adherence to compliance issues and deadlines
- Real-time error checks

### User-friendly, web-based solutions offer 24/7 access to real-time claims' status and payment processing.

Log on anytime from anywhere to:

- Check on your claim or payment status
- Read chart notes, dictations, lab results or any encounter document
- View customized reports or use Medrium's report generator to create your own
- Gauge productivity and revenue stream by physician, facility & RVU *and more*

## Frequently Asked Questions:

### Which hospital-based physicians does Medrium serve?

Medrium serves hospital-based physicians specializing in emergency medicine, radiology, anesthesiology and pathology.

### How much does Medrium cost?

Medrium charges a percentage of monthly payments. There is no start-up or licensing fee associated with Medrium's billing solutions.

### What hardware and/or software do I need to purchase?

Medrium's billing solutions do not require any software or installation. All you need is a computer and web browser.

### Is it safe for my information to be on the Internet?

Medrium uses state-of-the-art technology to guarantee all information is safe from interception and hacking.

### Where is my data stored?

Medrium stores all information in a secure fault-tolerant database. The database is then replicated in triplicate.

The screenshot displays the Medrium software interface. On the left, a 'QUEUE LISTING' table shows a list of claims with columns for Item ID, Status, Account ID, Account Name, Last Updated, and Work Status. All items are marked as 'Not Assigned' and 'Incomplete', with a 'Needs Coding' status. On the right, the 'DETAILED VIEW' for a specific claim is shown. It includes patient information (Name: DOE, JANE; Patient ID: 41; DOB: 04/19/1967), claim details (Claim ID: Not Assigned; Submission Status: Incomplete; Last Updated: 10/06/2008 02:51:54 PM), and billing provider information (Location: HOSPITAL; NPI #: [redacted]). A 'Diagnosis Codes' table shows a code of '11' on 06/27/2008. A 'Messages' table shows several messages, including one from 'IMPORT\_PARSE' dated 09/25/2008 at 00:54:59 PM, which contains detailed information about the claim's status and coding requirements.
